Mobile Fleet Fueling

Incorporate mobile fuel transactions onto T-Chek's [T-Card® fuel card](#) to gain better visibility, eliminate manual billing and increase control. T-Chek's Mobile Fleet Fueling Program provides an interface for participating mobile merchants to enter or upload transactions near real time. Companies receive detailed reporting to better manage their [fuel expenses](#). They can compare their own fuel card volume limits against the number of gallons a mobile fueller is actually charging. Reports validate if a company is being charged for a number of gallons that exceeds a vehicle's fuel capacity and billing is then rejected for correction by the mobile fueling merchant.

- ▶ Set volume limits by vehicle
- ▶ Receive online custom reporting
- ▶ Reduce liability of on-site fuel storage

A mobile fleet management service can help businesses manage both labor costs and fuel costs more effectively, possibly saving thousands of dollars per year, because drivers spend less time fueling and more time dedicated to delivering products. Commercial mobile fueling can be a strategic alternative to installing terminal fuel, and works well whether the vehicles are domiciled or dispersed. When a company decides to take advantage of mobile fuel, they need a cost effective reporting method to capture and track purchasing.

Mobile Fleet Fueling

More time on the road. Keep drivers on the roads operating and delivering products instead of spending quality drive time fueling.

Do not pay extra. Set limits by vehicle to track mobile fuel gallons and pay for actual product received instead of overbilled charges.

Custom reporting. Fleets can better manage overall fuel expenses through the use of our transaction detailed reporting.

Convenience. Fuel is delivered to company vehicles when they are parked and when drivers arrive to work their vehicles are fueled and ready to operate.

Cost effective. Mobile fleet fueling is a strong alternative to terminal fuel installation and works whether vehicles are domiciled or dispersed.
