## Virtual MasterCard® Purchasing Program

T-Chek's Virtual MasterCard Purchasing Program is different than a traditional credit card. Payments made with a virtual credit card provide a safe and efficient tool to make secure one time payments. Virtual credit cards allow you to create a unique one-time use account number with a specific amount and expiration date. Enter the required payment details necessary for reporting and cost allocation, and [eliminate manual accounting entries](#). Paying with a Virtual MasterCard account number eliminates the high costs of paper check writing associated with traditional accounts payable and purchase order programs.

- ▶ Make secure online payments to anyone who accepts MasterCard cards for payment
- ▶ Generate unique MasterCard account numbers
- ▶ Establish specific amounts, expiration dates and merchant categories
- ▶ Stay safe with maximum security and encrypting technologies
- ▶ Make repeatable payments to a single merchant with the ghost card feature

Easily reconcile purchases with online account management and gain access to real-time updates and customized reporting. Enter custom required reference fields at the time the MasterCard account number is generated to fit company data and reporting needs.

T-Chek's Virtual MasterCard Program is commonly used for, but is not limited to, purchases or payments for office supplies, insurance, governmental licensing and permits, training, conference fees, advertising, vehicle maintenance and emergency over the road repairs. The virtual credit card numbers can be used anywhere MasterCard cards are accepted.

## Virtual MasterCard® Purchasing Program

**Predetermined limits.** A Virtual MasterCard account number is randomly generated with a user assigned dollar amount, thus reducing the risks associated with an open credit limit.

**Secure transaction information.** The latest security and encrypting technologies are used to ensure that account and transaction information is kept private and secure.

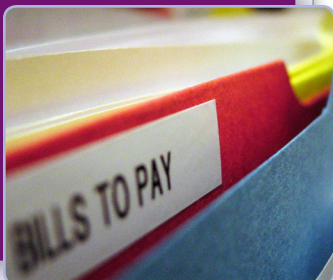

**Reduce liability.** Management determines whom within a corporation will have access to create virtual credit card numbers and maximum dollar limits.

**Visibility through real-time updates.** Access online account management with real-time updates. Reporting flexibility and details of transactions (including rejects) are available as they occur. Track who creates virtual credit card payments, for what amounts, and to whom payment was made.

**Generate numbers easily.** Payments are created online with the click of a button for anything requiring controlled payment.

**Seamless integration.** Customer specific data (PO number, asset number, job number, etc.) will be included in customized reports or data files. Integration with General Ledger accounting systems eliminates errors and saves time.

**Electronic payments.** A [paperless purchasing program](#) saves time and money.
